## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-15&17-32 are allowable over the prior art of record.
2. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 1, the invention relates to the field of consumer electronic devices coupled in an audio/video network, including a system and method for organizing and accessing data stored in a hard disk device in the audio/video network.

The closest references Brown et al (US 5,875,446) disclose a system and method for generating grouped hierarchical views (with ranking) for a set of (hypermedia) objects in a query context based on one or more relationships, and Yuen et al (US 5,488,409) teach apparatus and methods for facilitating and monitoring the management, storage, and retrieval of programs on a cassette tape.

However Brown et al and Yuen et al fail to explicitly disclose in a mass storage device, a method for organizing and accessing stored data representing audio and visual data, where the method further comprises deriving a unique object identifier for the object and assigning the unique object identifier to the object, wherein the unique object identifier is unique to the mass storage device and also unique to all mass storage devices.

Regarding claim 15, the invention relates to the field of consumer electronic devices coupled in an audio/video network, including a system and method for organizing and accessing data stored in a hard disk device in the audio/video network.

The closest references Brown et al (US 5,875,446) disclose a system and method for generating grouped hierarchical views (with ranking) for a set of (hypermedia) objects in a query context based on one or more relationships, and Yuen et al (US 5,488,409) teach apparatus and methods for facilitating and monitoring the management, storage, and retrieval of programs on a cassette tape.

However, Brown et al and Yuen et al fail to explicitly disclose mass storage unit, where the mass storage unit further comprises wherein the controller is for associating an object with the data, deriving a unique object identifier for the object, assigning the unique object identifier to the object, and accessing the object using the unique object identifier, wherein the unique object identifier is unique to the mass storage unit and across all mass storage units.

Regarding claim 27, the invention relates to the field of consumer electronic devices coupled in an audio/video network, including a system and method for organizing and accessing data stored in a hard disk device in the audio/video network.

The closest references Brown et al (US 5,875,446) disclose a system and method for generating grouped hierarchical views (with ranking) for a set of (hypermedia) objects in a query context based on one or more relationships, and Yuen

et al (US 5,488,409) teach apparatus and methods for facilitating and monitoring the management, storage, and retrieval of programs on a cassette tape.

However, Brown et al and Yuen et al fail to explicitly disclose mass storage unit, where the mass storage unit further comprises wherein the microcontroller means is for associating an object with the data, deriving a unique object identifier for the object, assigning the unique object identifier to the object, and accessing the object using the unique object identifier, wherein the unique object identifier is unique to the mass storage unit and across all mass storage units.
